Risk Indicator (class AH EUR)

For further information on the risks and the risk indicator of the fund, please refer to the latest KID of the concerned classes. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 3 out of 7, which is a medium-low risk class. This indicator assesses potential losses in future returns at a medium-low level, and it is unlikely that poor market conditions will affect the value of the shares in which the product invests and therefore the value of the product itself.

This level of risk reflects the fact that the product invests up to 60% of its assets in shares, that it may invest part of its portfolio in warrants or call options on shares, which are more volatile than shares and may lose all their value at expiry date, and finally because it may favor particular economic sectors or regions, including emerging markets.

Under unusual market conditions, additional risks could arise: liquidity (convertible bonds may become hard to value or to sell at a desired price and time), default (an issuer's bonds could become worthless if it is unable

to repay its debts), counterparty (the product could lose money if any entity with which it does business becomes unwilling or unable to honor its obligations to the product), legal and tax risks (the product could be affected by foreign legal and tax changes, some of which may be retroactive). Please refer to the prospectus for more details. This product does not include any protection from future market

perfomance so you could lose some or all of your investment.
