A MANAGEMENT COMPANY UNDER LUXEMBOURG LAW

nt marketing communication on its own does not give complete information about the SICAV and should the be read before any investment together with the Key Information Document (KID), the prospectus as well

## FUND OBJECTIVE, STRATEGY AND RISKS (Class A EUR)

The product aims to increase the value of your investment over the long term.

Under normal market conditions, the product invests primarily in shares, or other equity-related securities, of issuers around the world, including emerging markets and in any currency. It also invests in other types of financial instruments consistent with its investment objective. The product may use derivatives for investment purposes or to reduce investment risk (hedging).

The manager selects portfolio investments on the basis of his convictions. He favours companies which in his view offer strong prospects of earnings growth and benefit from a robust competitive position. Though the portfolio will be diversified in terms of regions and economic sectors, it is not constructed by reference to any market index. The manager will generally focus on regions and countries with above-average potential growth rates. This product does not distribute dividends (which means that the income generated is added to the price of the product).

You may place orders to buy or sell the product on a daily basis.

The product is aimed at individual investors wishing to invest for the long term (we recommend an investment horizon of 6 years). The investor must have a good knowledge of the risks associated with financial markets and be prepared to accept capital losses due to fluctuations in the value of the assets in the portfolio.

These objectives as well as the investment policy are an exact copy of those indicated in the corresponding KID.

The investment which is promoted concerns the acquisition of units or shares in a fund, and not in a given underlying asset.

The product is actively managed.

The summary risk indicator is a guide to the level of risk of this product compared to other products, It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 5 out of 7, which is a medium-high risk class. This indicator assesses potential losses in future returns at a medium-high level, and poor market conditions will likely affect the value of the shares in which the product invests and therefore the value of the product itself. This level of risk reflects the fact that the product invests mainly in shares, and may favor particular economic sectors or regions, including emerging markets

Under unusual market conditions, additional risks could arise: counterparty (the product could lose money if any entity with which it does business becomes unwilling or unable to honor its obligations to the product), legal and tax risks (the product could be affected by foreign legal and tax changes, some of which may be retroactive). Please refer to the prospectus for more details.

### This product does not include any protection from future market perfomance so you could lose some or all of your investment. **PERFORMANCE AND NAV EVOLUTION (Class A EUR)**
