

The present marketing communication on its own does not give complete information about the SICAV and should therefore be read before any investment together with the Key Information Document (KID), the prospectus as well as the latest annual/semi-annual report of the SICAV.

FUND OBJECTIVE, STRATEGY AND RISKS (Class AH EUR)

The product aims to increase the value of your investment over the long term.
Under normal market conditions, the product invests primarily in shares of issuers around the world, including emerging markets, China and Russia. It also invests in other types of securities consistent with its investment objective. The product may use derivatives for investment purposes or to reduce investment risk (hedging). In order to diversify the sources of performance, the product is managed by different fund managers of TreeTop Asset Management, each of them applying their own approach to global active management.
The manager's objective is to hedge positions in currencies other than EUR representing more than 2.5% of the net asset value of the product.
This product does not distribute dividends (which means that the income generated is added to the price of the product).
You may place orders to buy or sell the product on a daily basis.
The product is aimed at individual investors wishing to invest for the long term (we recommend an investment horizon of 6 years). The investor must have a good knowledge of the risks associated with financial markets and be prepared to accept capital losses due to fluctuations in the value of the assets in the portfolio.
These objectives as well as the investment policy are an exact copy of those indicated in the corresponding KID.
The investment which is promoted concerns the acquisition of units or shares in a fund, and not in a given underlying asset.
The product is actively managed.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.
We have classified this product as 4 out of 7, which is a medium risk class. This indicator assesses potential losses in future returns at a medium level, and poor market conditions could affect the value of the shares in which the product invests and therefore the value of the product itself.
This level of risk reflects the fact that the product invests mainly in shares, and may favor particular economic sectors or regions, including emerging markets.
Under unusual market conditions, other risks could arise: liquidity (convertible bonds may become hard to value or to sell at a desired price and time), counterparty (the product could lose money if any entity with which it does business becomes unwilling or unable to honor its obligations to the product), legal and tax risks (the product could be affected by foreign legal and tax changes, some of which may be retroactive). Please refer to the prospectus for more details.
As this product does not include capital protection, particularly against market fluctuations, you could lose all or part of your investment, but not more than the amount of your investment.
