

The present Monthly Factsheet on its own does not give complete information about the SICAV and should therefore be read before any investment together with the Key Investor Information Document (KIID), the prospectus as well as the latest annual/semi-annual report of the SICAV.

FUND OBJECTIVE, STRATEGY AND RISKS

The fund aims to replicate, as closely as possible, the performance of the MSCI ACWI Index (the "Index"), regardless of whether its performance is positive or negative. Daily, for all share classes, the Management Company aims to achieve a tracking error level between changes in the valuation of shares of the fund and that of the Index of less than 0.50% (no guarantee is given in this regard by the Management Company). The share valuation used for this calculation is that of the fund's shares before currency hedging. This share class provides partial currency exchange hedging: 100% hedging of currency risk against EUR in the following currencies : USD, GBP, JPY, CAD, CHF at AUD and without hedging on other currencies. Given the composition of the Index as of December 31, 2017, this means that the portion of the portfolio not hedged against currency risk is approximately 15%, this proportion being subject to change depending on the weight of currencies not covered within the Index. In this respect, the different share classes proposed may have different levels of spread compared to the Index, due in particular to the impact that the currency risk hedging strategy may have. For this share class, the currency risk will be reduced by the partial coverage, but the tracking error compared to the MSCI ACWI Index, which is not currency hedged, will be higher. The historical differences this level of tracking error to be estimated at 5% (based on normal market conditions); this level however may be exceeded in case of high currency volatility between them.

The Index is an equity index calculated and published by the international index provider MSCI Inc. ("MSCI"). The shares forming the MSCI ACWI Index are among the most significant values of the equity markets in developed and emerging countries.

The exposure to the Index will be achieved through physical replication with a direct investment in all components of the Index (namely, principally in shares of companies in developed and emerging markets worldwide). This replication can lead to portfolio transaction costs having a considerable impact on the investment return. These costs are borne by the assets of the fund, in addition to the costs mentioned in the KIID.

However, in order to handle the entries and exits, as well as the characteristics of the local equity markets (market access, liquidity, local tax), the Management Company will be able to combine physical replication with synthetic replication through derivative instruments, such as futures contracts. Irrespective of the selected replication method, the fund will continuously maintain a total exposure to the Index. In the event of synthetic replication of the Index, counterparty risk will be higher.

The fund may enter into temporary acquisitions and sales of securities. Forward financial instruments may also be used for hedging and / or for the purpose of achieving the investment objective.

This share class is reserved for investors who have an account with the Distributor, Treetop Asset Management Belgium, and at the time of subscription, give instruction to the Distributor to make a donation to King Baudouin Foundation on their behalf equal to 2% of their investment (meaning for an investment of 100, a subscription of 98 and a donation of 2).

These objectives as well as the investment policy are an exact copy of those indicated in the corresponding KIID.

The fund does not offer either protection or any capital guarantee or a guaranteed yield. The fund is classified in this particular category because it invests in equities, which are generally more risky than the bonds or money market instruments. The major risks for the compartment not included in the risk/return profile are: counterparty risk (the risk that the credit institution may not honour its commitments with regard these instruments. This risk is present when using financial instruments to ensure the synthetic replication of the Index) and the currency risk (the fund invests in securities denominated in currencies other than that of the fund, the risk that the value of an investment may be influenced by exchange rate fluctuations is real).

CHARACTERISTICS OF THE MSCI ACWI Index as of 30/09/19

The MSCI ACWI is an equity index calculated and published by the international index provider MSCI Inc. ("MSCI"). The equities included in the composition of the MSCI All Country World Index are among the most significant values of the stock markets of 23 developed and 26 emerging countries. With 2,852 constituents, this index covers approximately 85% of existing investment opportunities in the markets of listed equities worldwide. The entire methodology for the Index construction is available on the MSCI website: www.msci.com.
